Male: Reactome

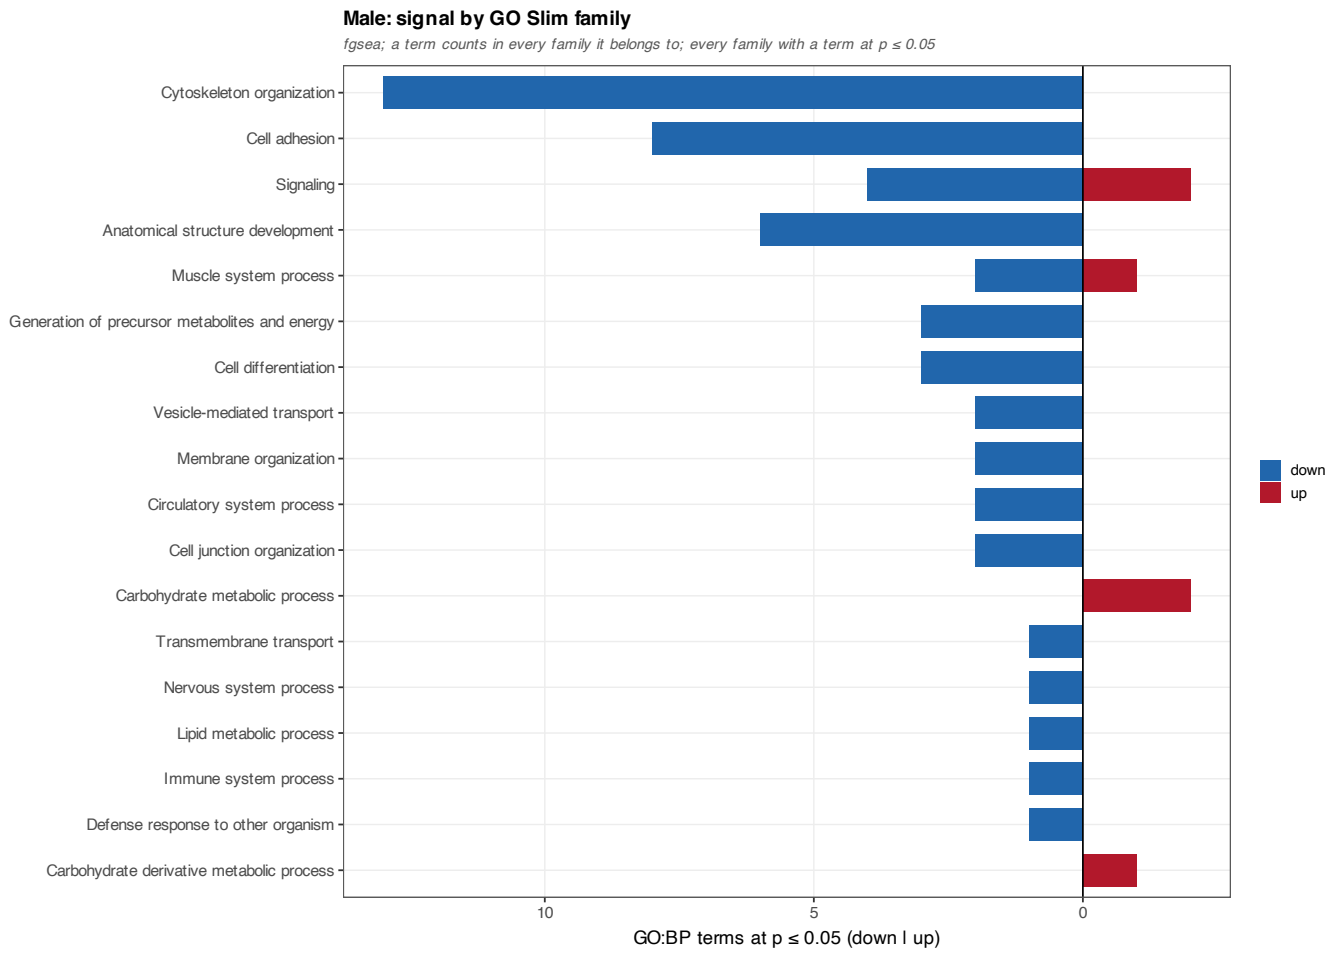

*12 strongest terms the EnrichmentMap flag keeps; * FDR≤0.05*

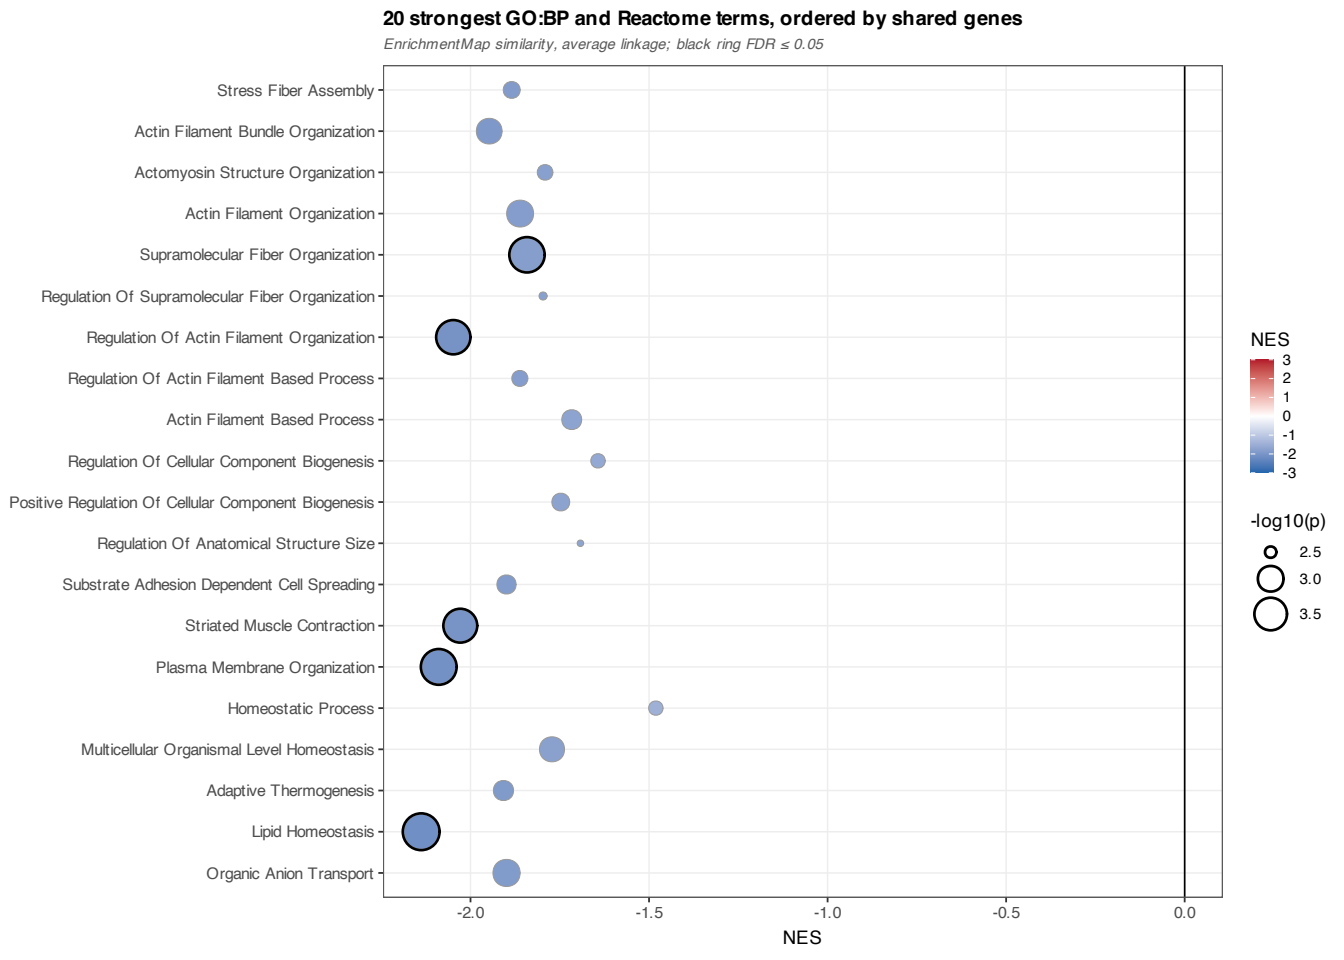

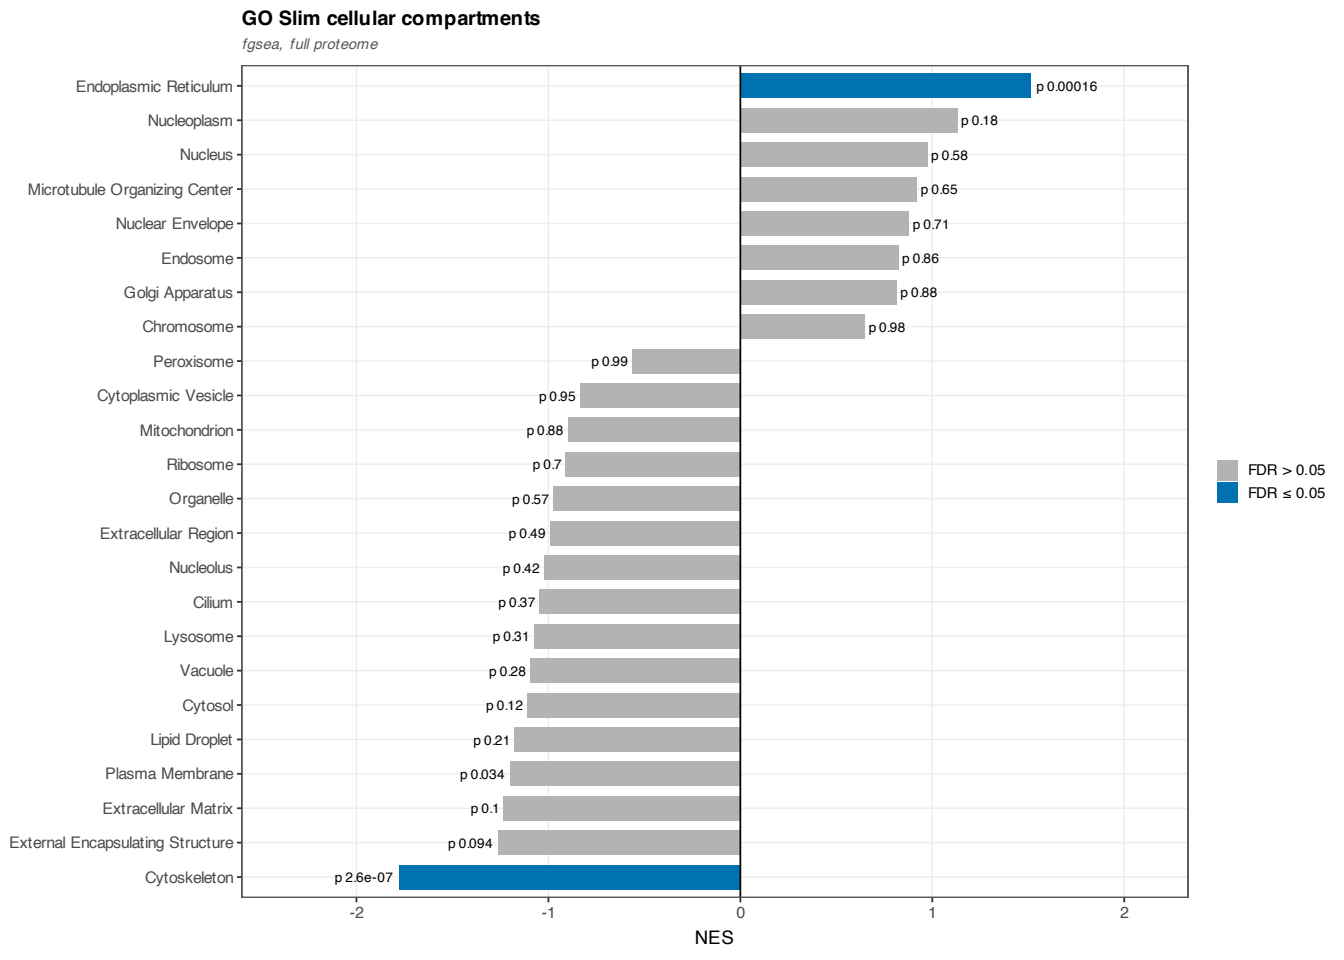

Male: MitoCarta

*12 strongest terms the EnrichmentMap flag keeps; * FDR≤0.05*

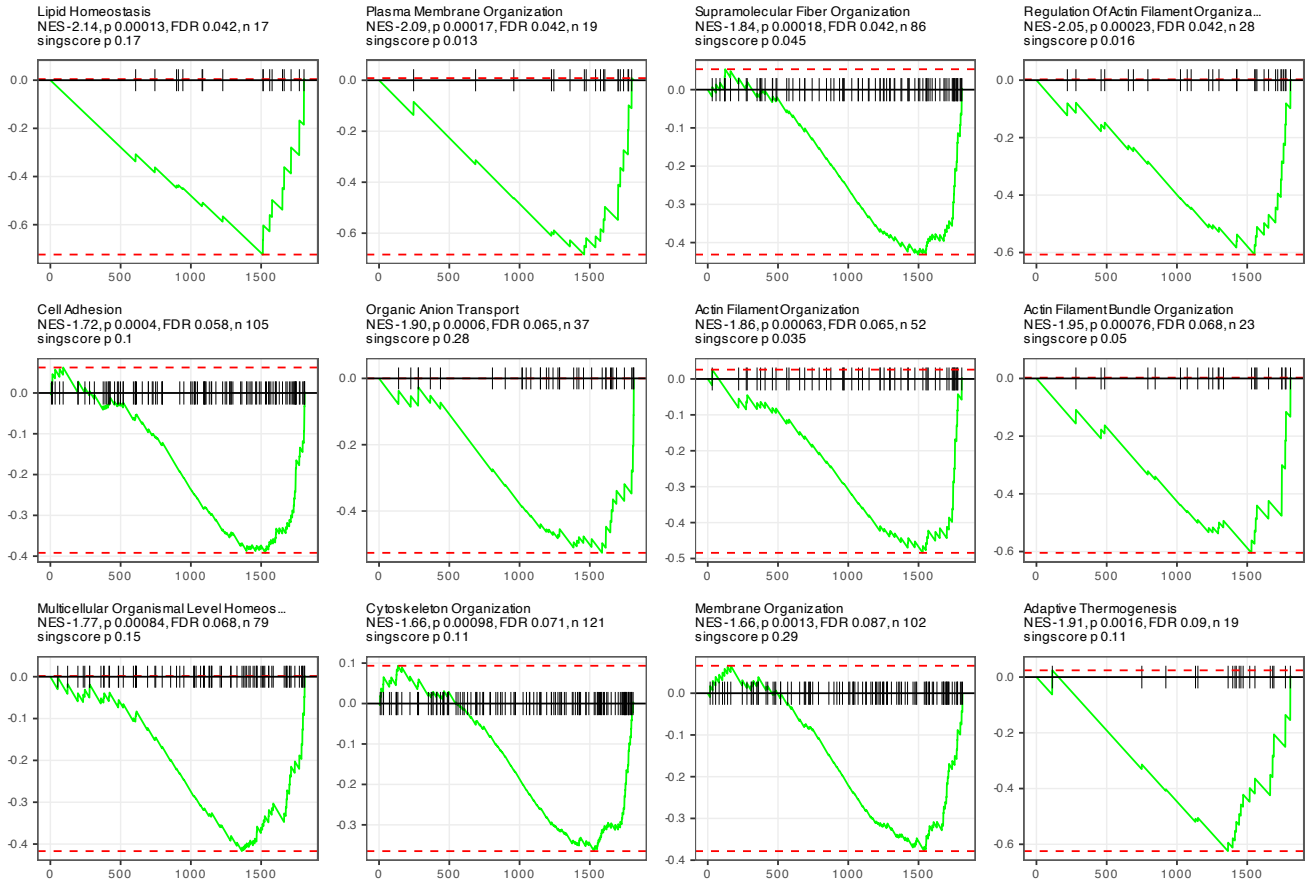

Male: signal by GO Slim family
fgsea; a term counts in every family it belongs to; every family with a term at p ≤ 0.05
Cytoskeleton organization
Cell adhesion
Signaling
Anatomical structure development
Muscle system process
Generation of precursor metabolites and energy
Cell differentiation
Vesicle-mediated transport
Membrane organization
Circulatory system process
Cell junction organization
Carbohydrate metabolic process
Transmembrane transport
Nervous system process
Lipid metabolic process
Immune system process
Defense response to other organism
Carbohydrate derivative metabolic process

up

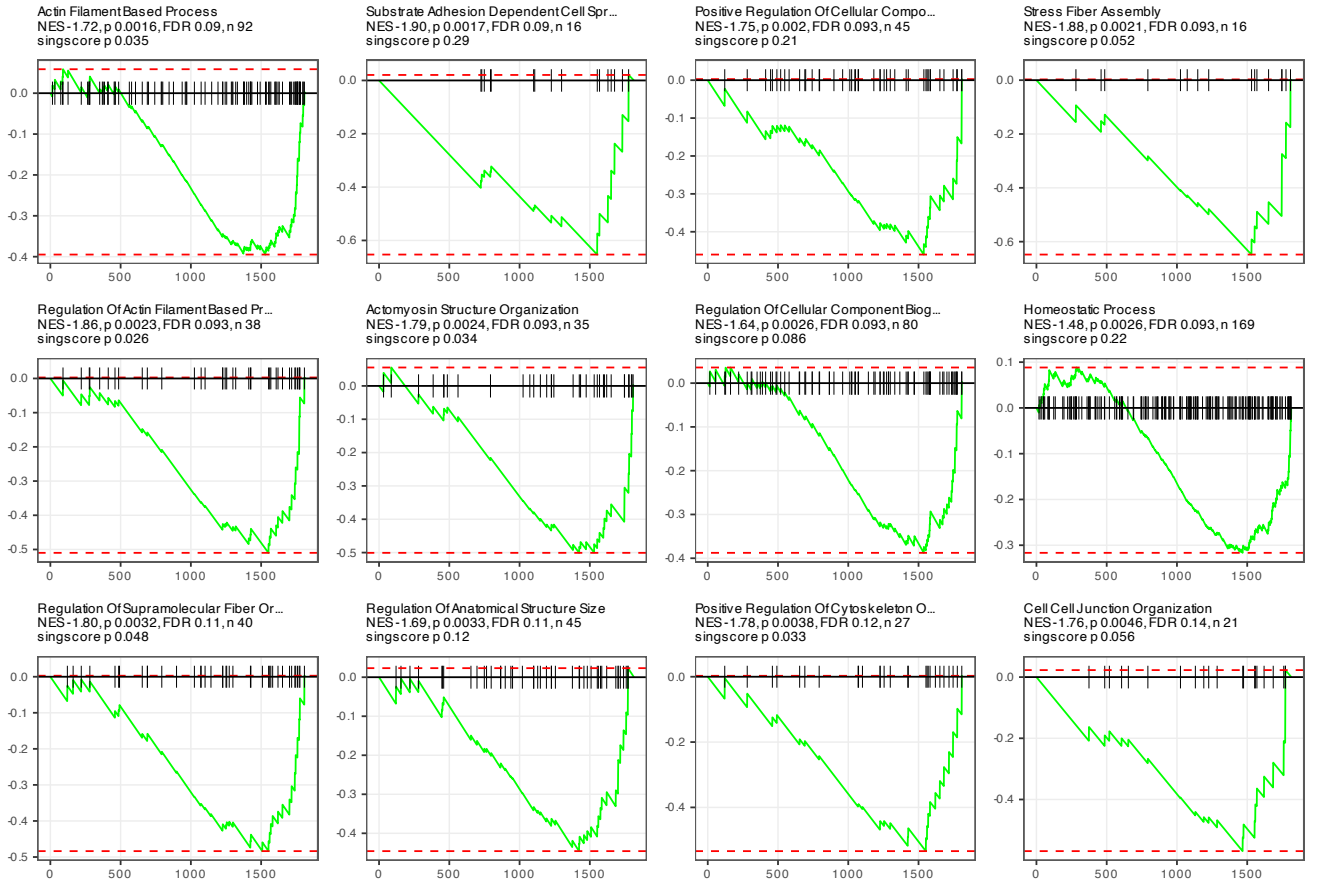

20 strongest GO:BP and Reactome terms, ordered by shared genes
EnrichmentMap similarity, average linkage; black ring FDR ≤ 0.05
Stress Fiber Assembly
Actin Filament Bundle Organization
Actomyosin Structure Organization
Actin Filament Organization
Supramolecular Fiber Organization
Regulation Of Supramolecular Fiber Organization
Regulation Of Actin Filament Organization
Regulation Of Actin Filament Based Process
Actin Filament Based Process
Regulation Of Cellular Component Biogenesis
Positive Regulation Of Cellular Component Biogenesis
Regulation Of Anatomical Structure Size
Substrate Adhesion Dependent Cell Spreading
Striated Muscle Contraction
Plasma Membrane Organization
Homeostatic Process
Multicellular Organismal Level Homeostasis
Adaptive Thermogenesis
Lipid Homeostasis
