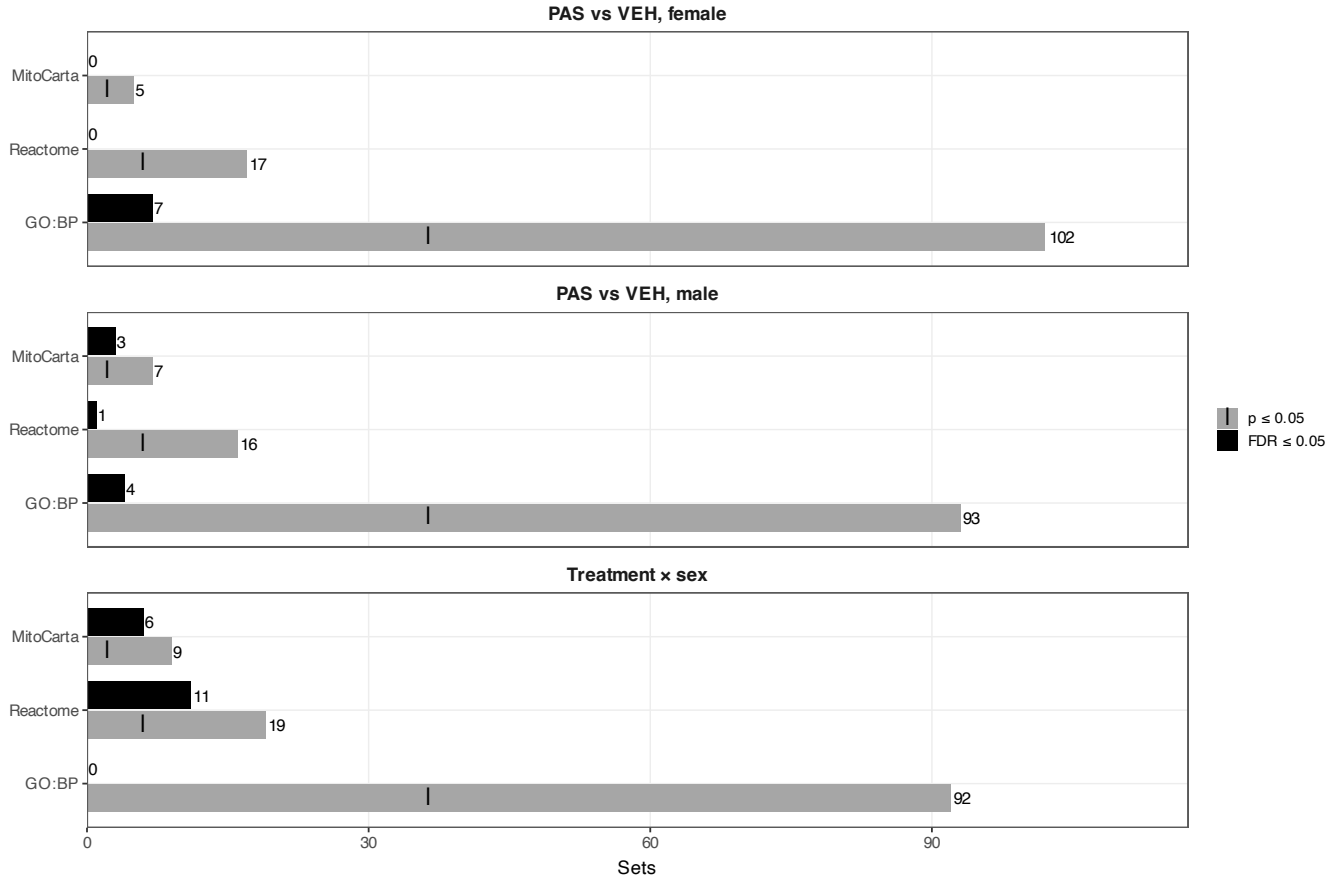
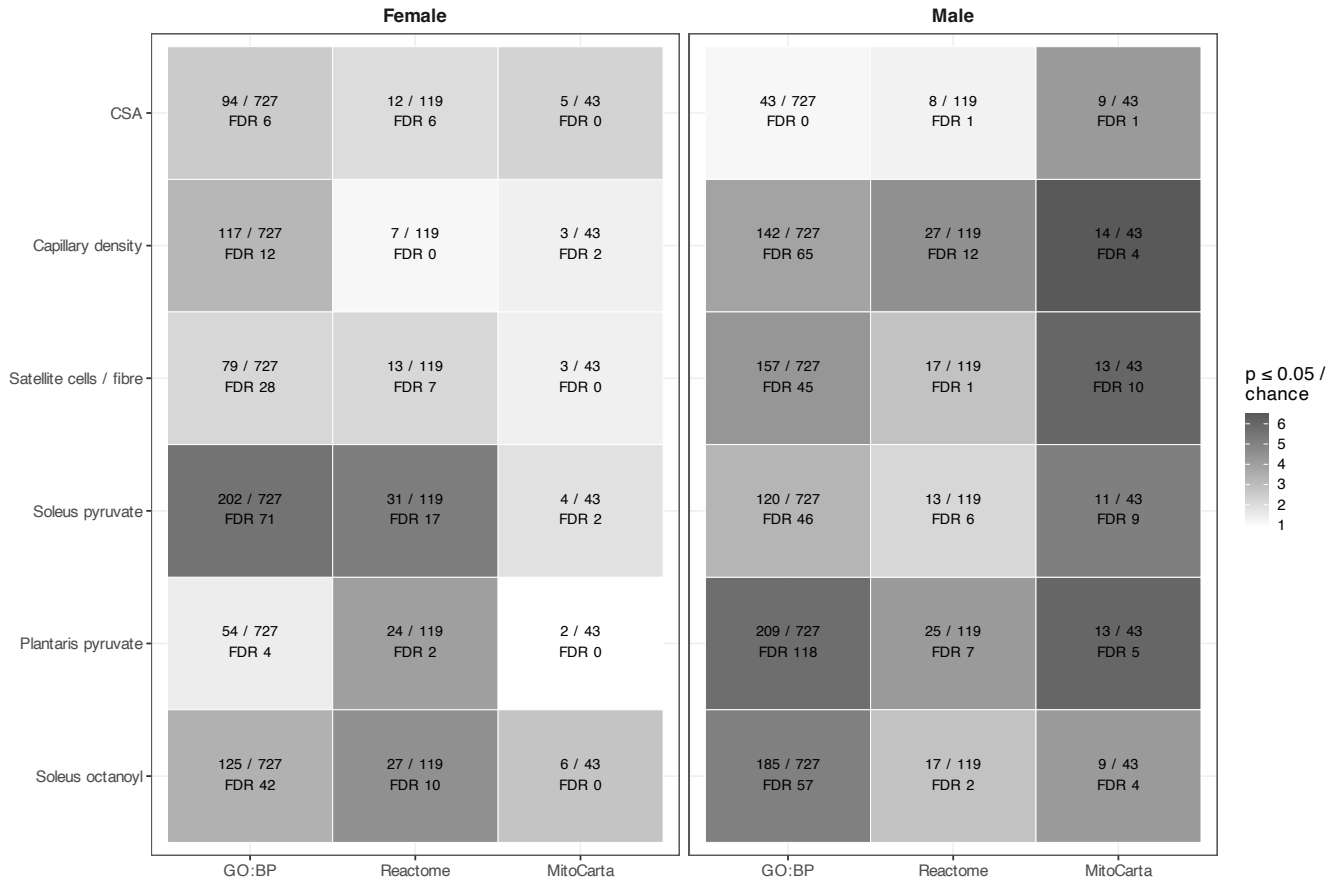
fgsea, each arc contrast

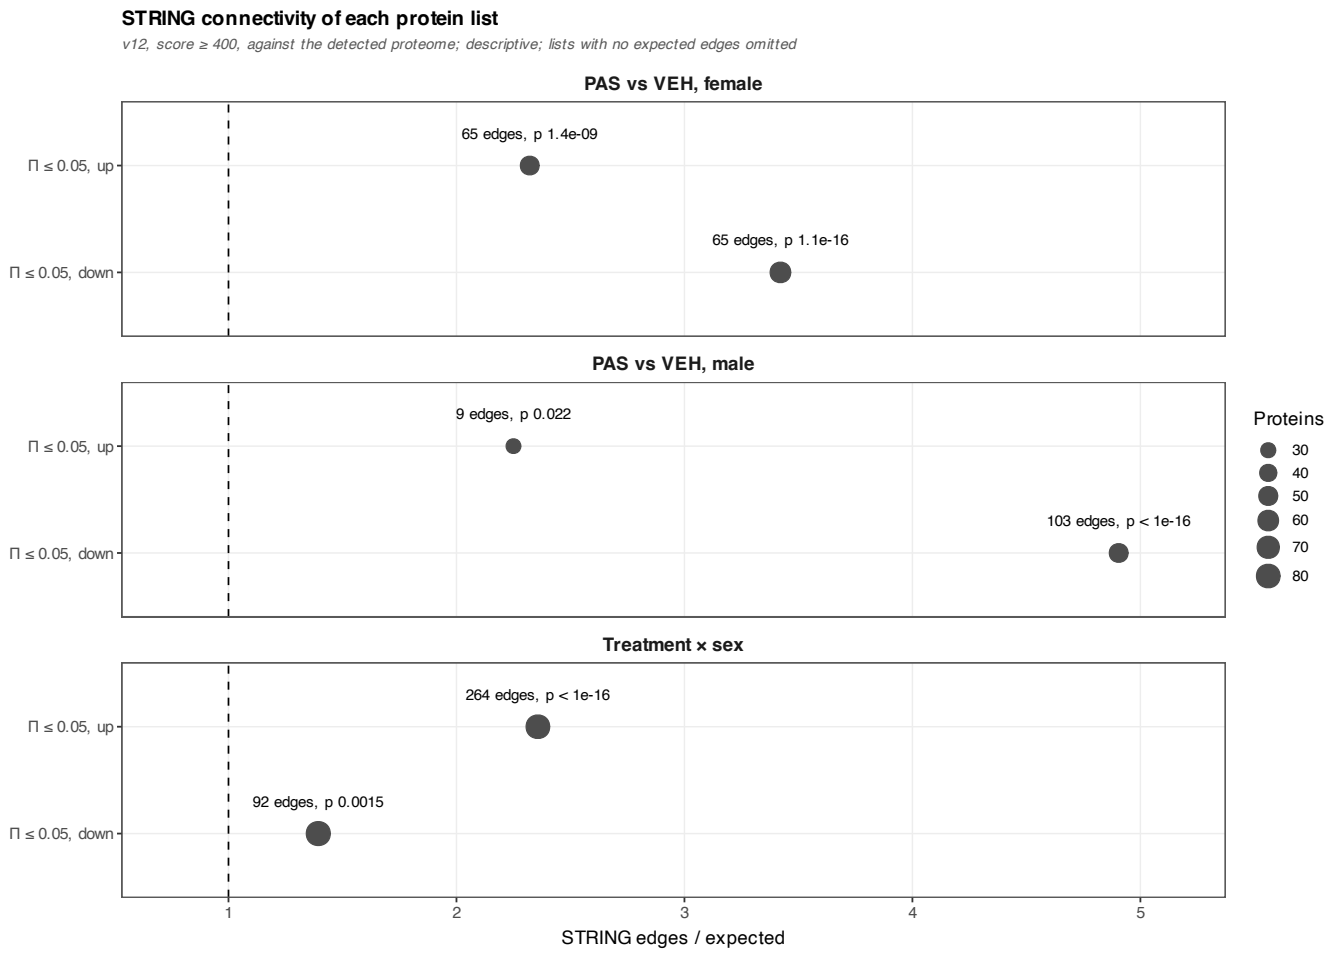
BH within contrast and collection; bar mark: sets at p ≤ 0.05 expected by chance



Pathways moving with each phenotype

fgsea on protein association t across one sex's PAS and vehicle mice (co-movement)





STRING connectivity of each protein list
v12, score ≥ 400, against the detected proteome; descriptive; lists with no expected edges omitted
PAS vs VEH, female
65 edges, p 1.4e-09
65 edges, p 1.1e-16
PAS vs VEH, male
9 edges, p 0.022
103 edges, p < 1e-16
Treatment × sex
264 edges, p < 1e-16
92 edges, p 0.0015
Π ≤ 0.05, up
Π ≤ 0.05, down
