**Male: PAS vs VEH, male, every protein**

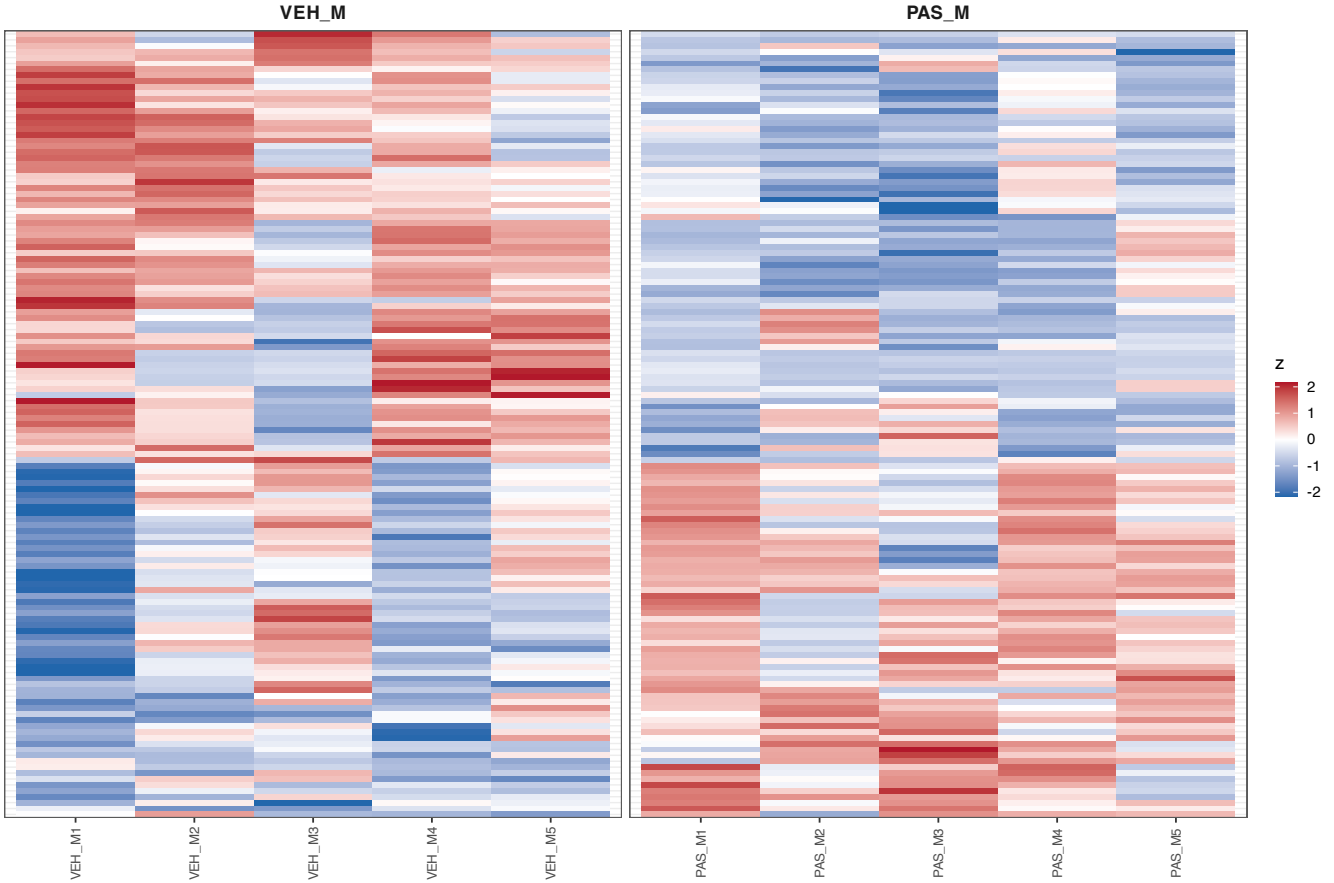

*limpa dpcDE, BH within universe; labelled: FDR ≤ 0.05 and the 10 smallest p*

Proteins per tier
Dashed: proteins at p ≤ 0.05 expected by chance in each direction; Π can include p > 0.05

**All 133 proteins at p ≤ 0.05, per mouse**

*Rows z-scored across these mice, clustered on 1 - Pearson r (display only)*

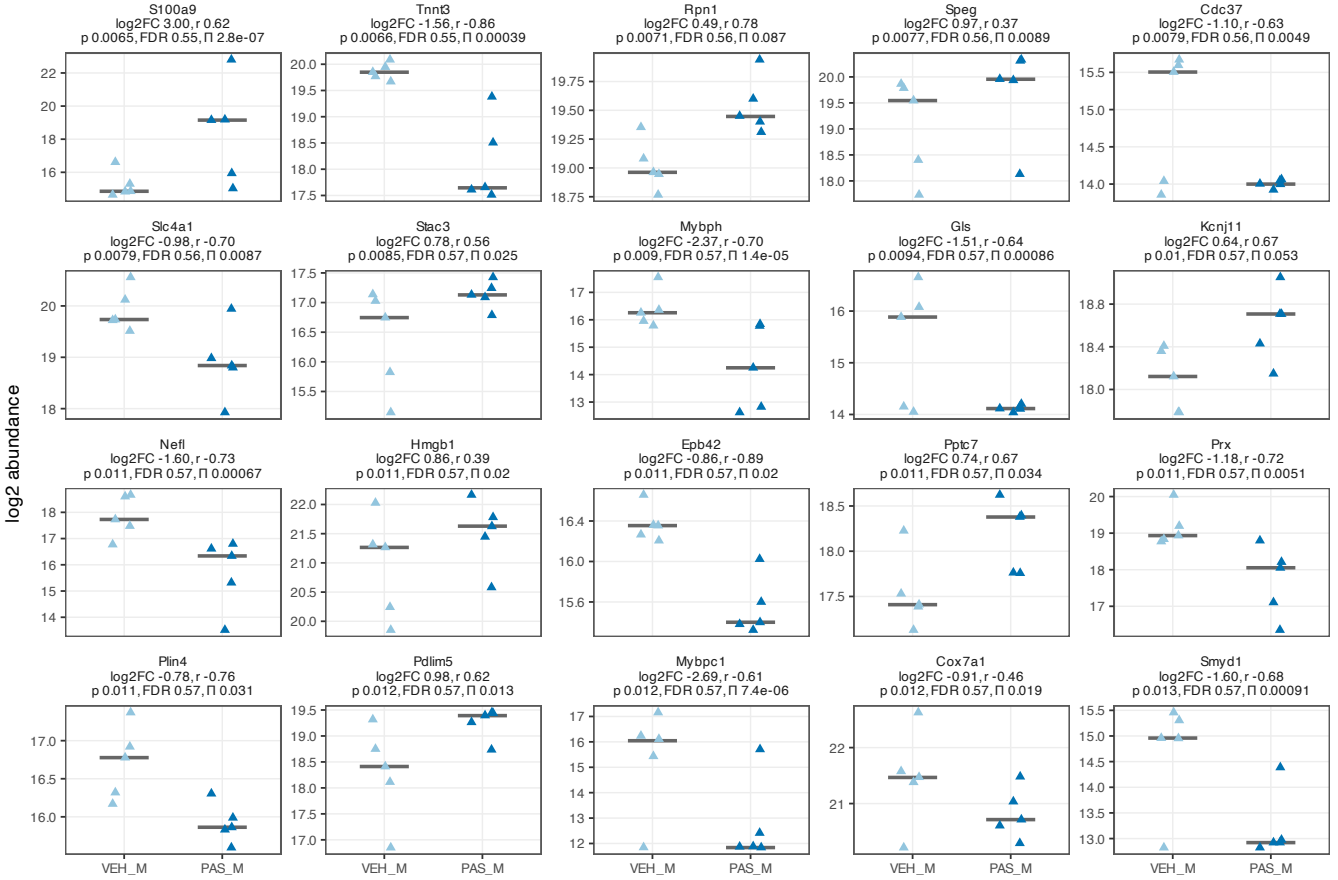

**Male: every protein at p ≤ 0.05, in order of p**

*log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)*

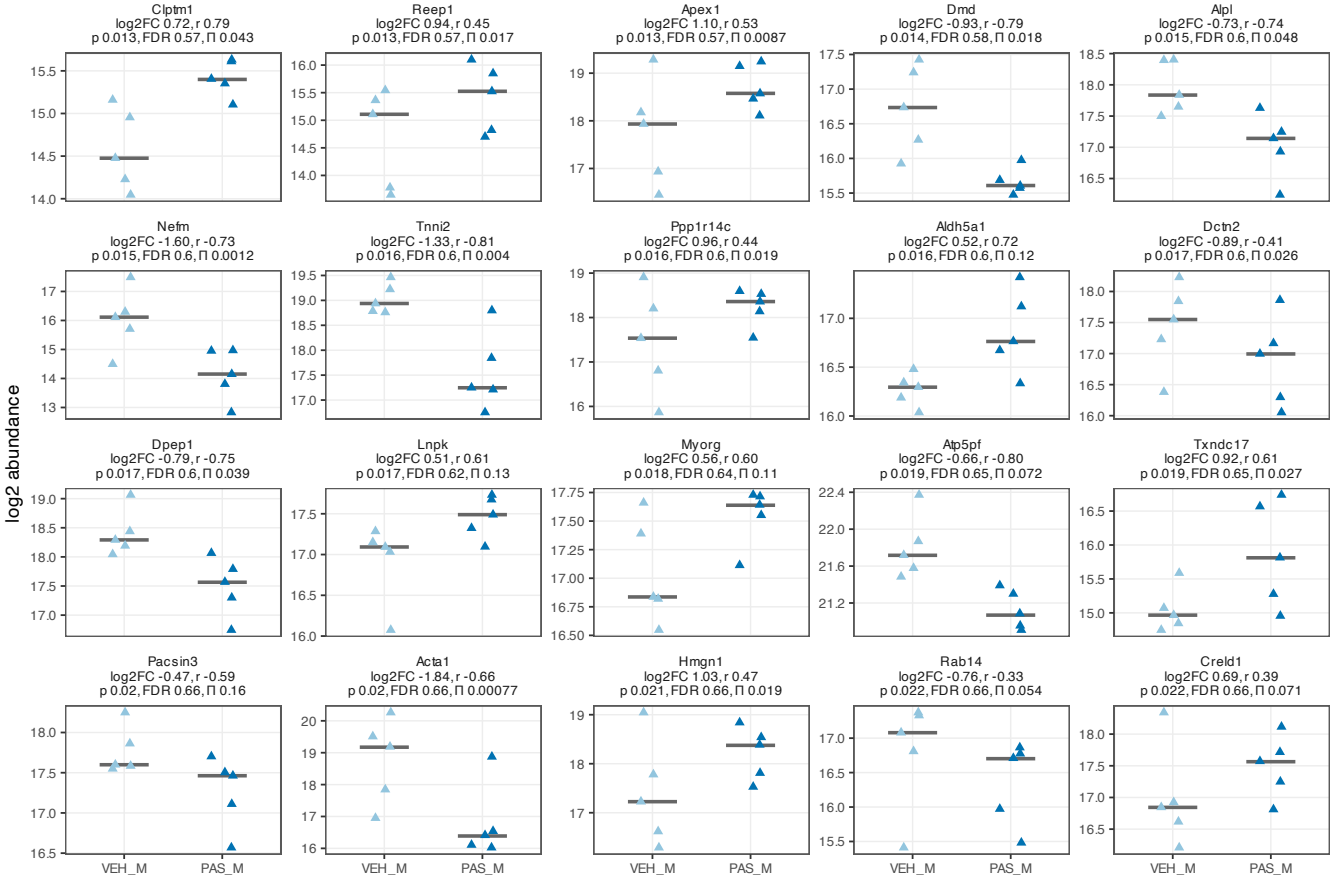

**Male: every protein at p ≤ 0.05, in order of p**

*log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)*

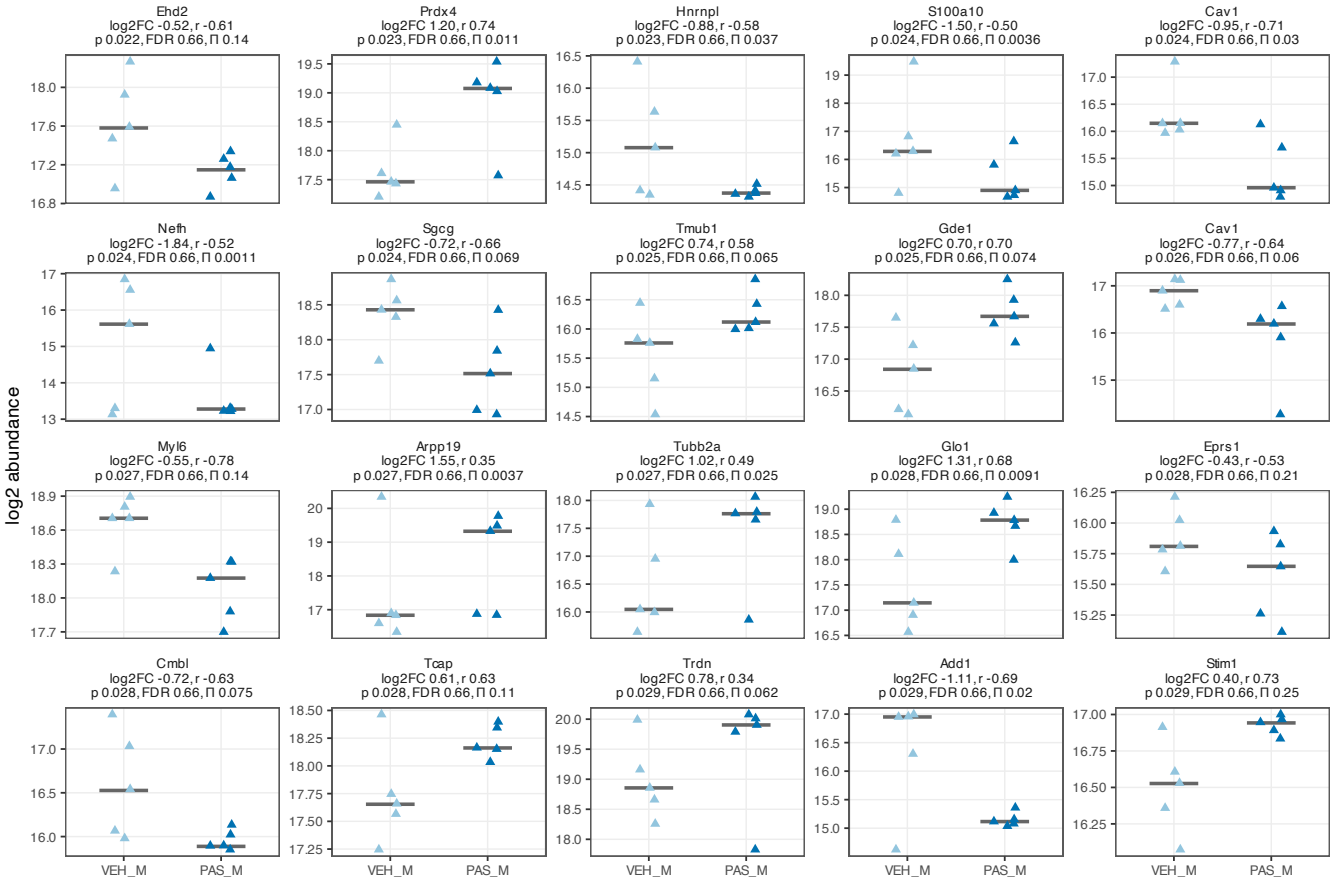

**Male: every protein at p ≤ 0.05, in order of p**

*log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)*

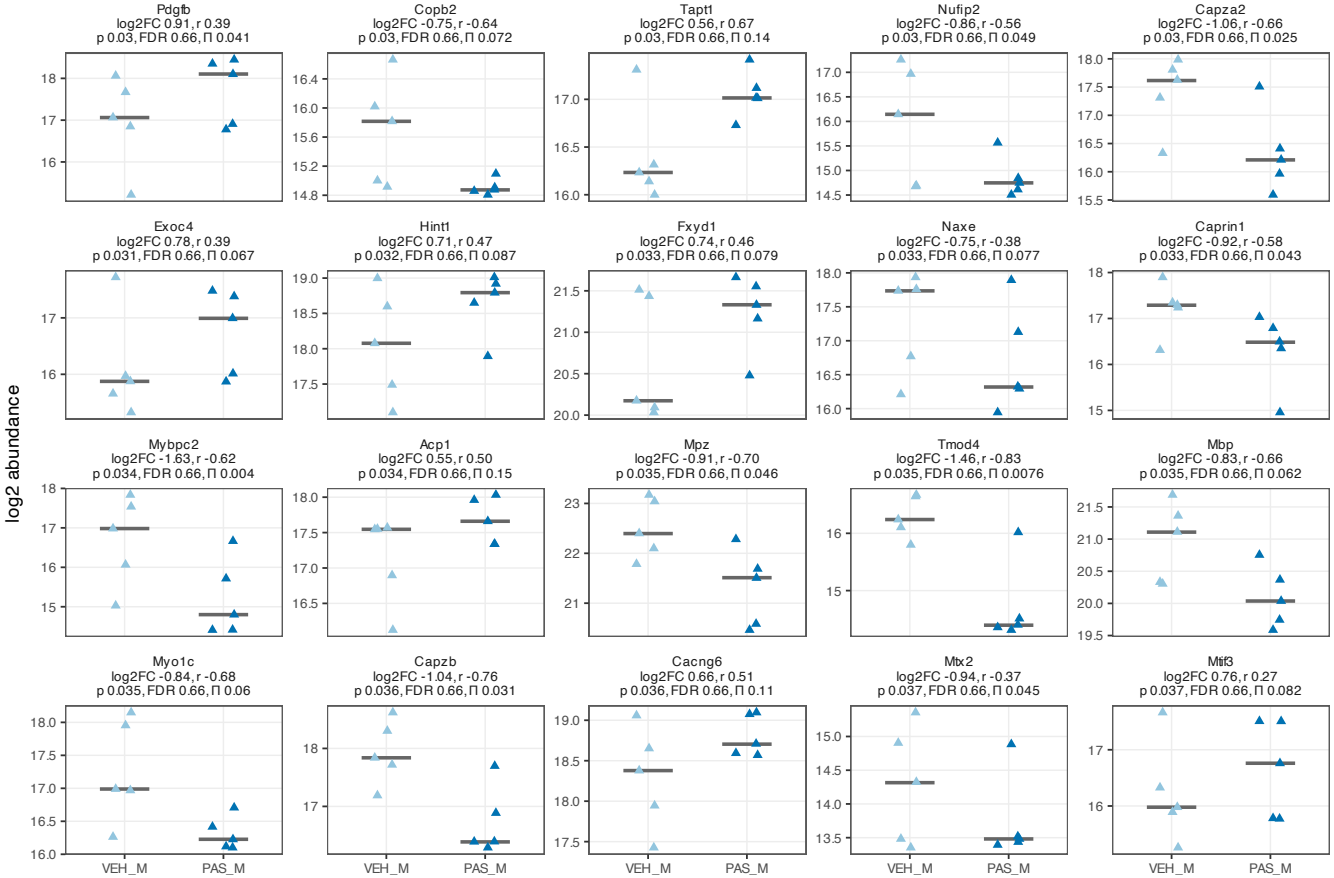

**Male: every protein at p ≤ 0.05, in order of p**

*log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)*

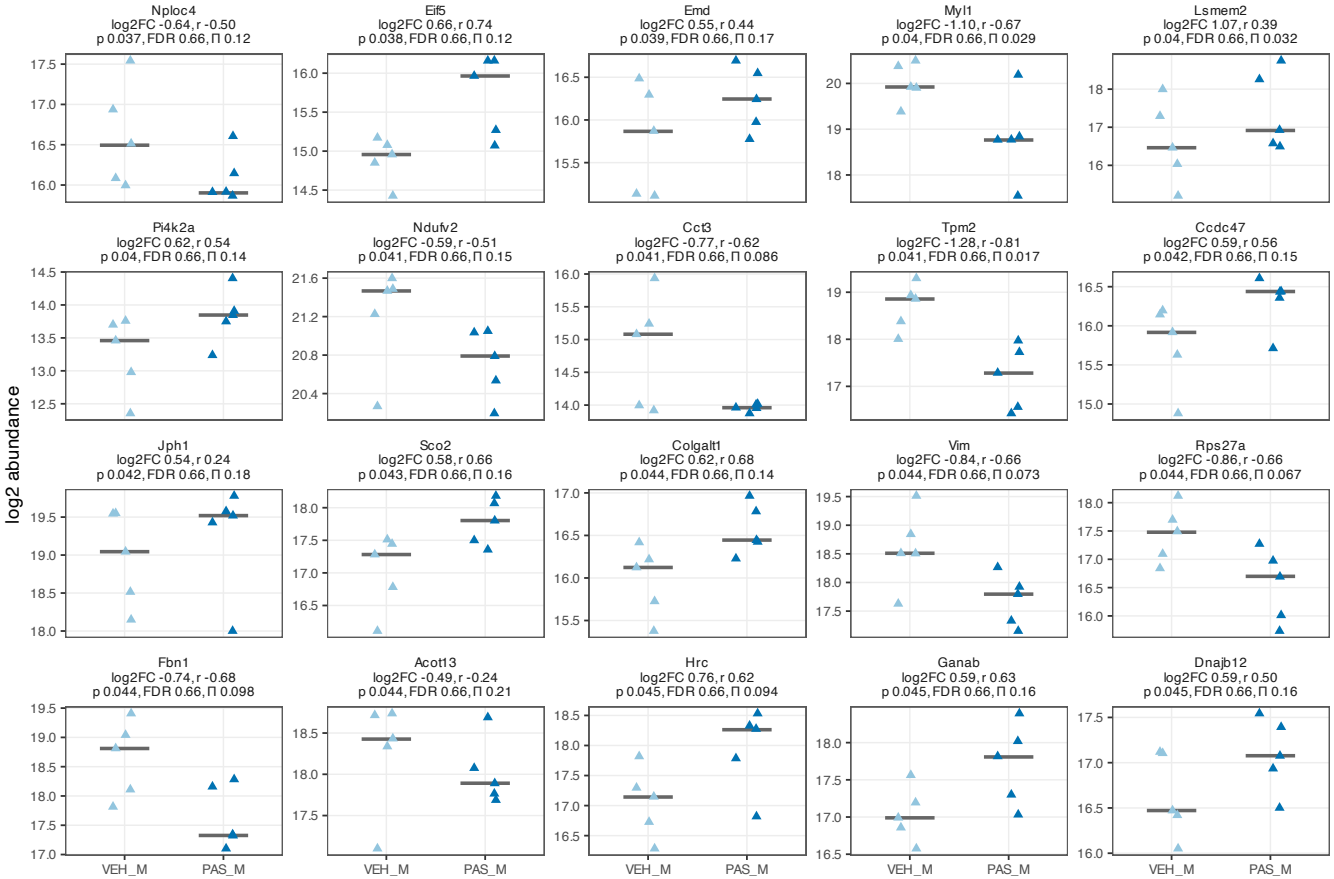

**Male: every protein at p ≤ 0.05, in order of p**

*log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)*

**Male: every protein at p ≤ 0.05, in order of p**

*log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)*

**Male: every protein at p ≤ 0.05, in order of p**

*log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)*
