Female: PAS vs VEH, female, every protein

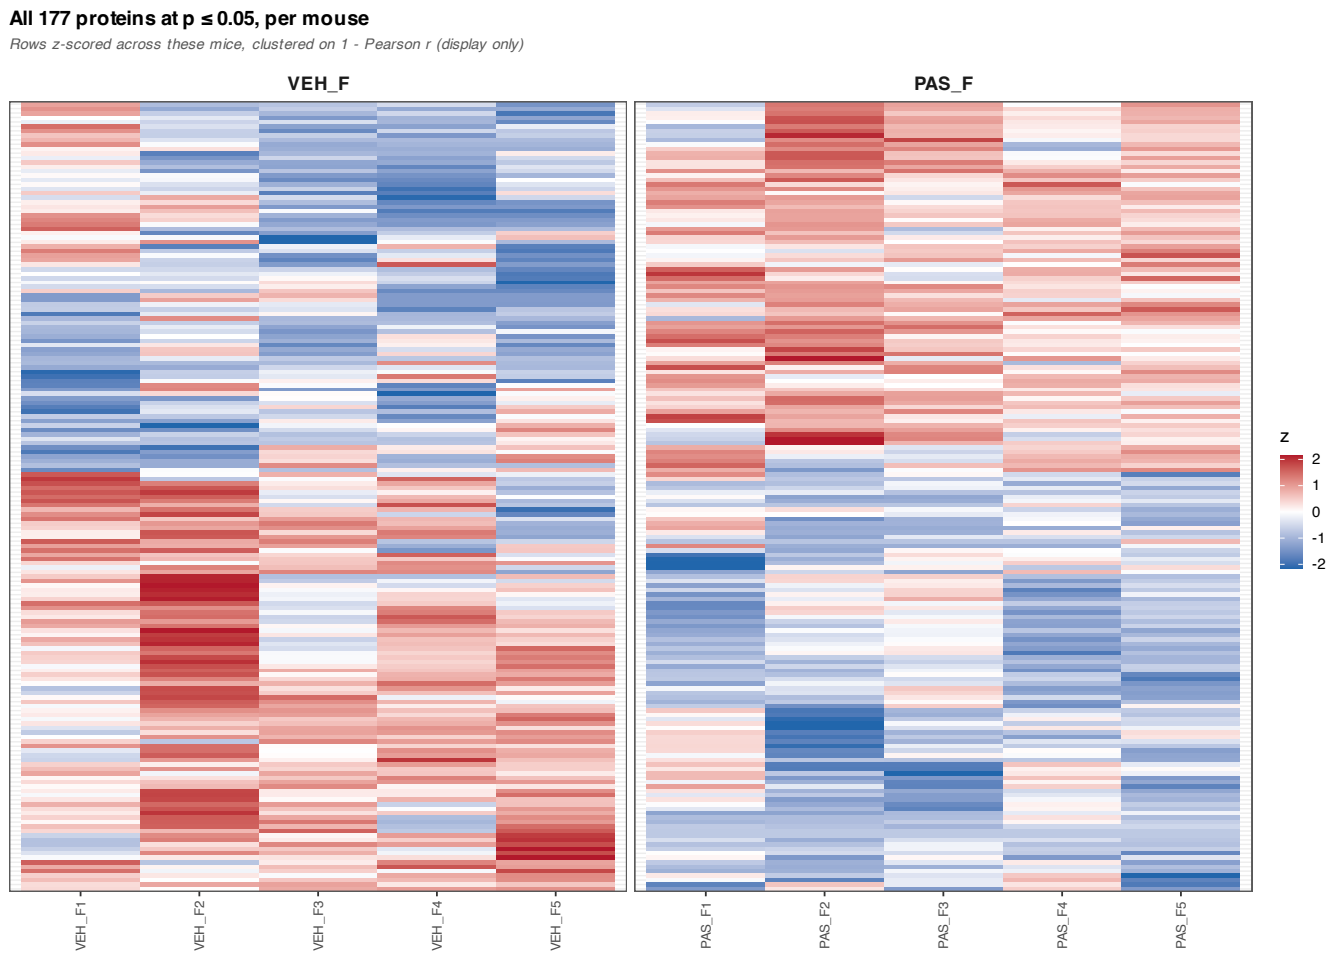

limpa dpcDE, BH within universe; labelled: FDR ≤ 0.05 and the 10 smallest p

Proteins per tier

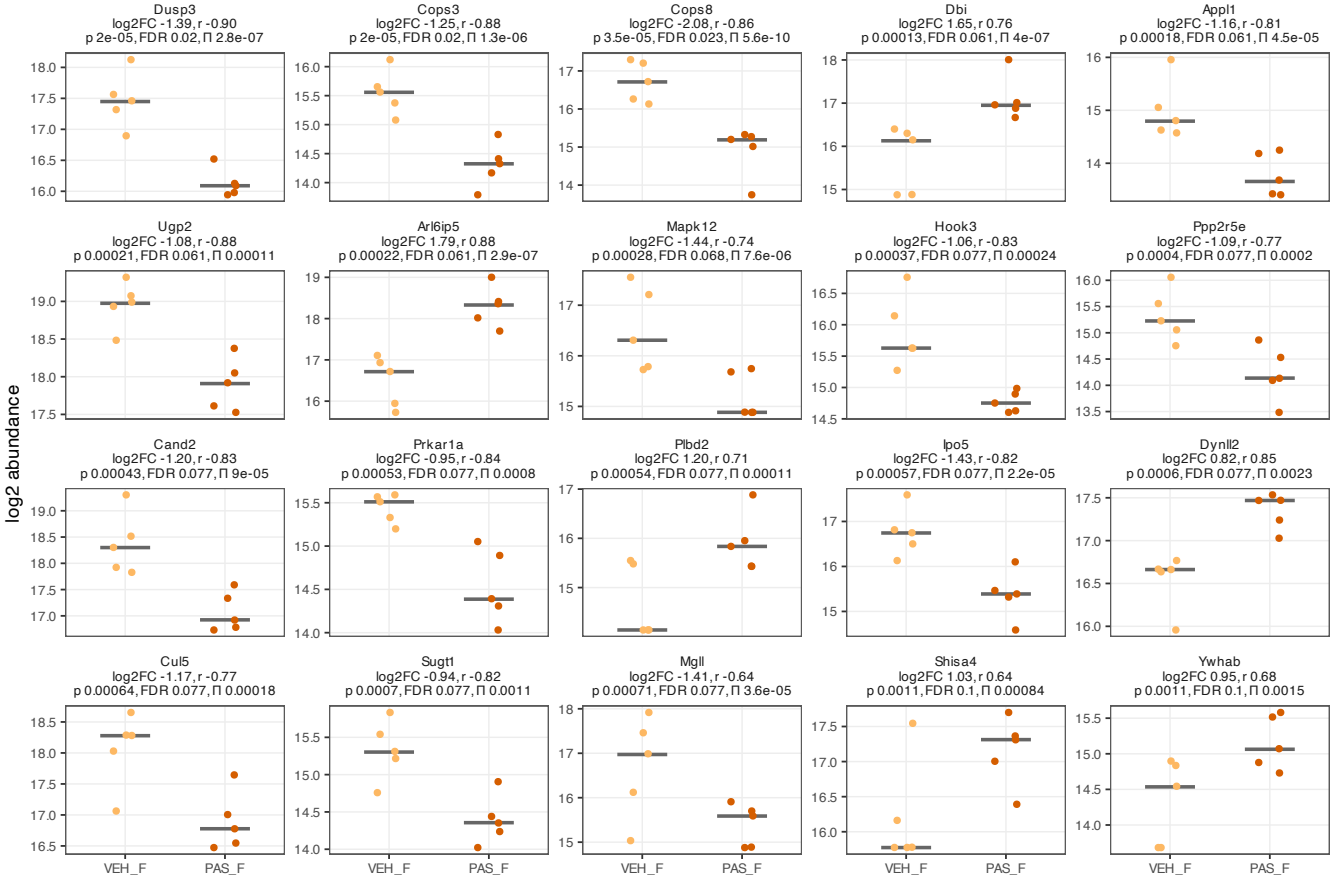

Dashed: proteins at p ≤ 0.05 expected by chance in each direction; Π can include p > 0.05

All 177 proteins at p ≤ 0.05, per mouse
Rows z-scored across these mice, clustered on 1 - Pearson r (display only)

Female: every protein at p ≤ 0.05, in order of p

log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)

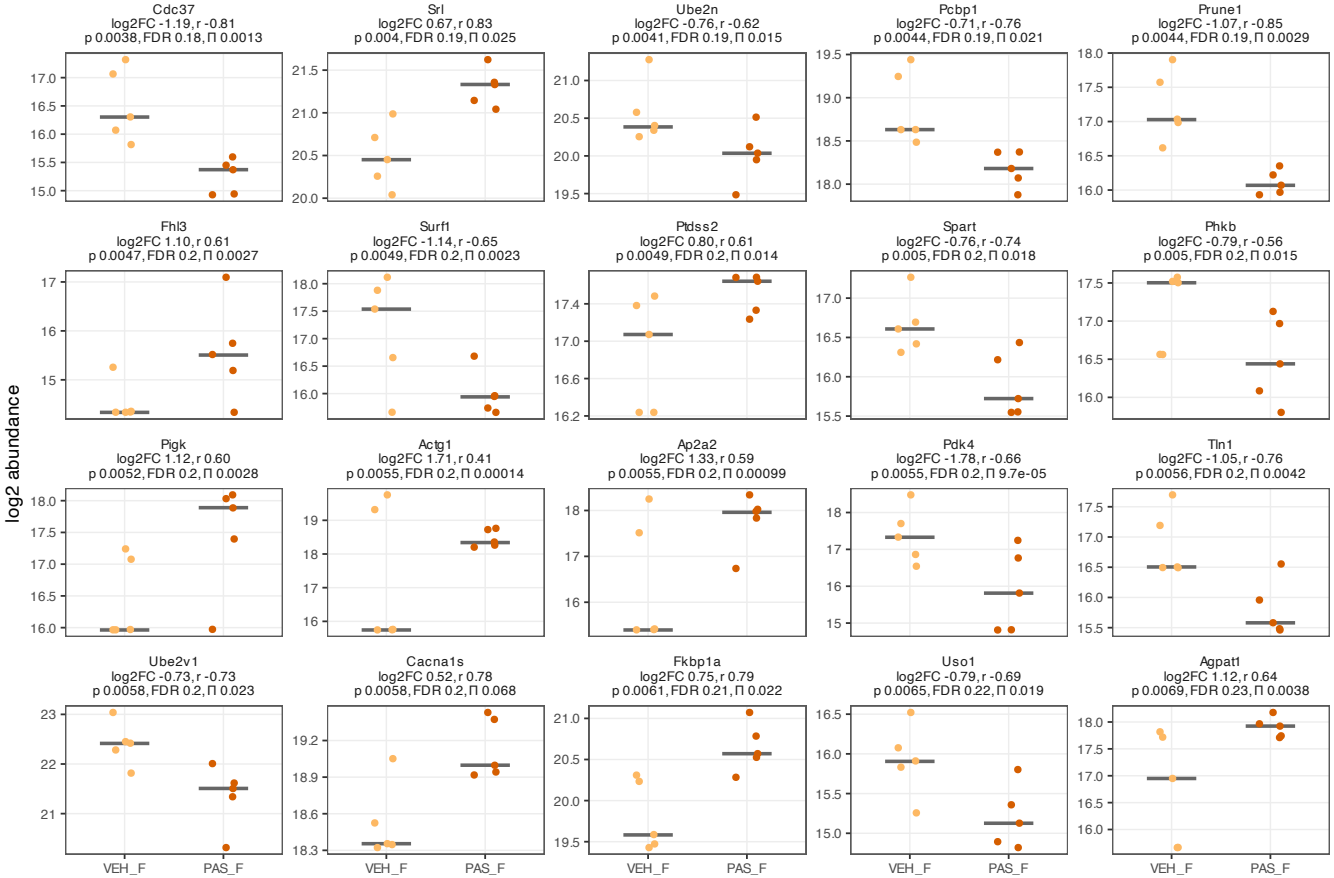

Female: every protein at p ≤ 0.05, in order of p

log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)

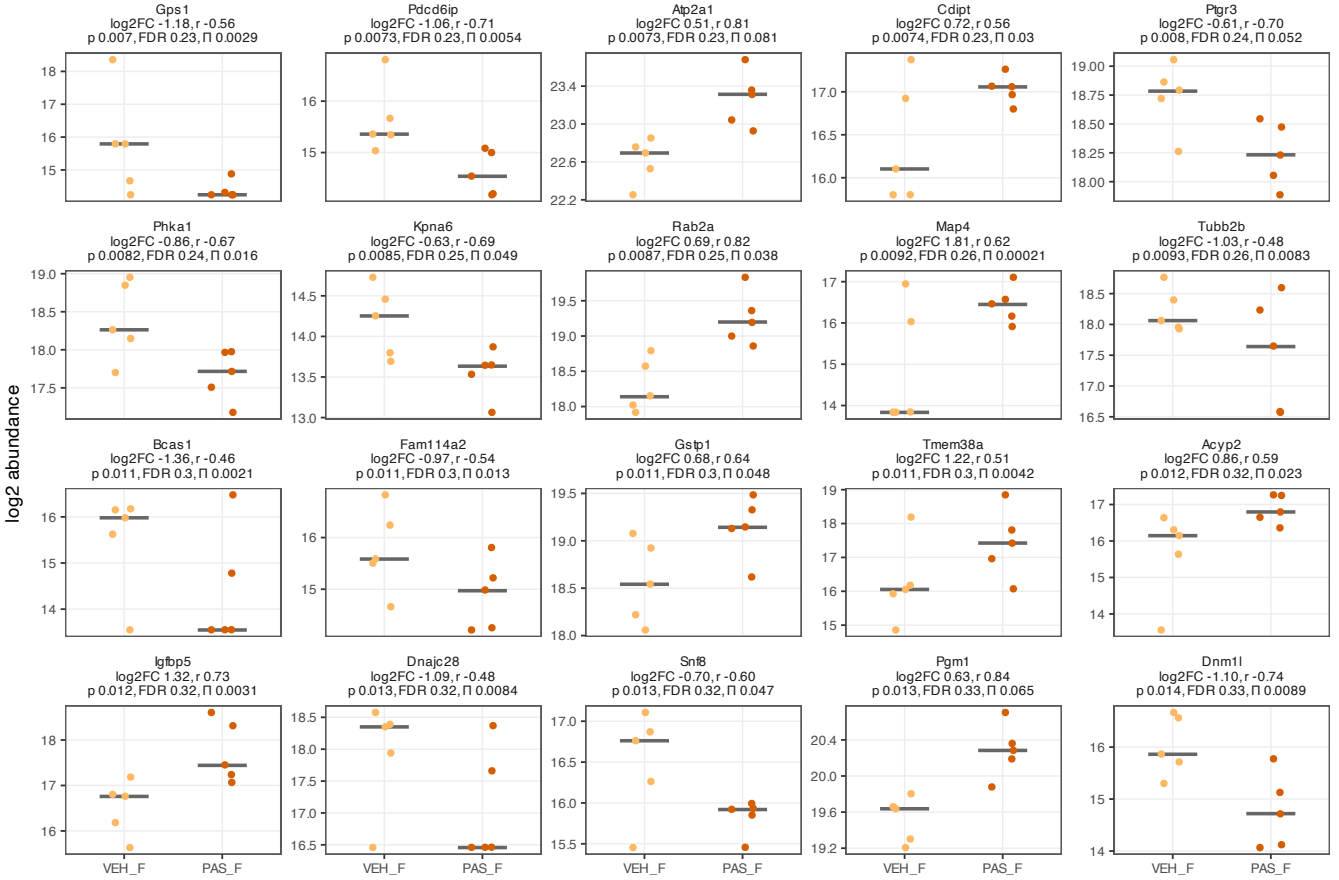

Female: every protein at p ≤ 0.05, in order of p

log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)

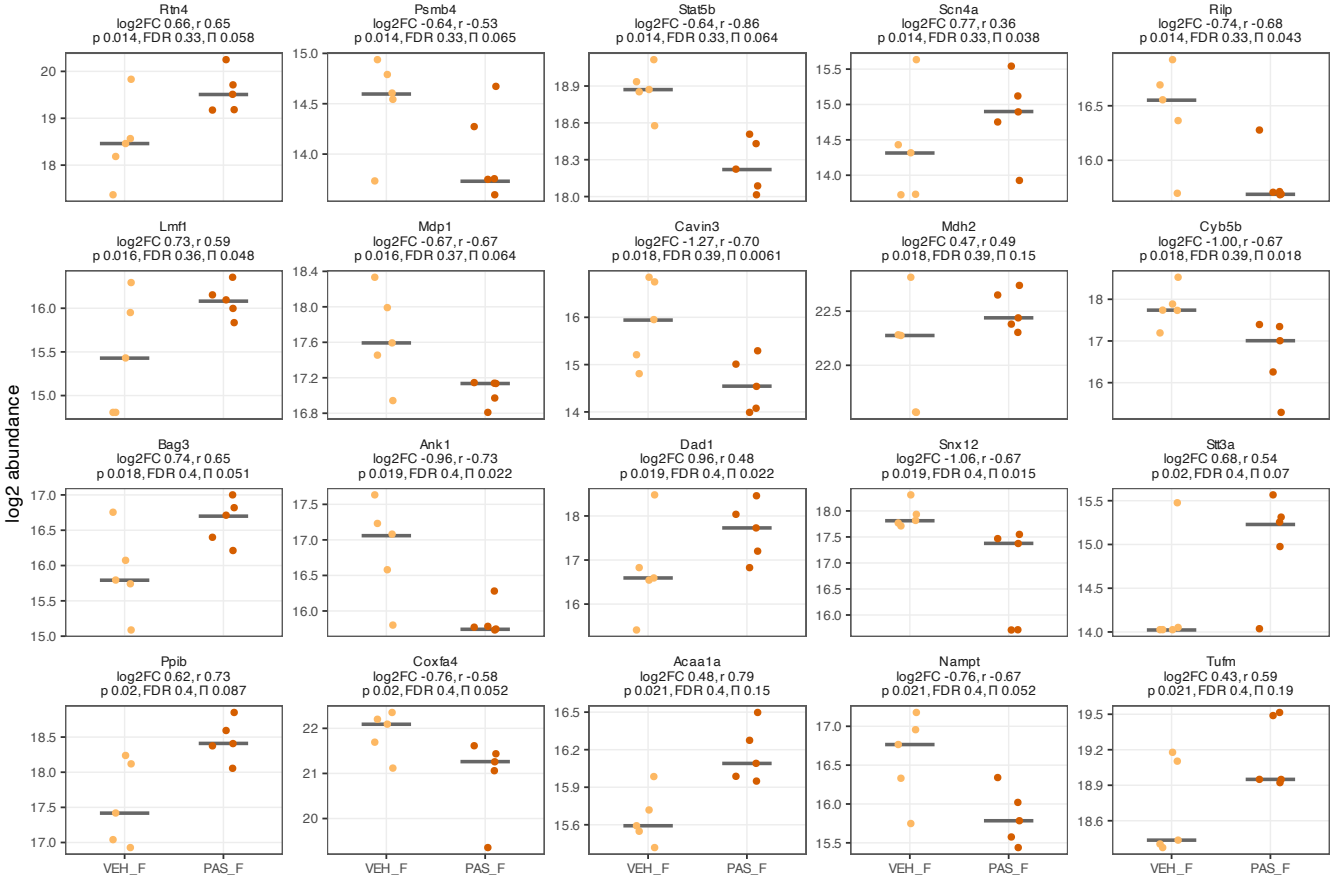

Female: every protein at p ≤ 0.05, in order of p

log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)

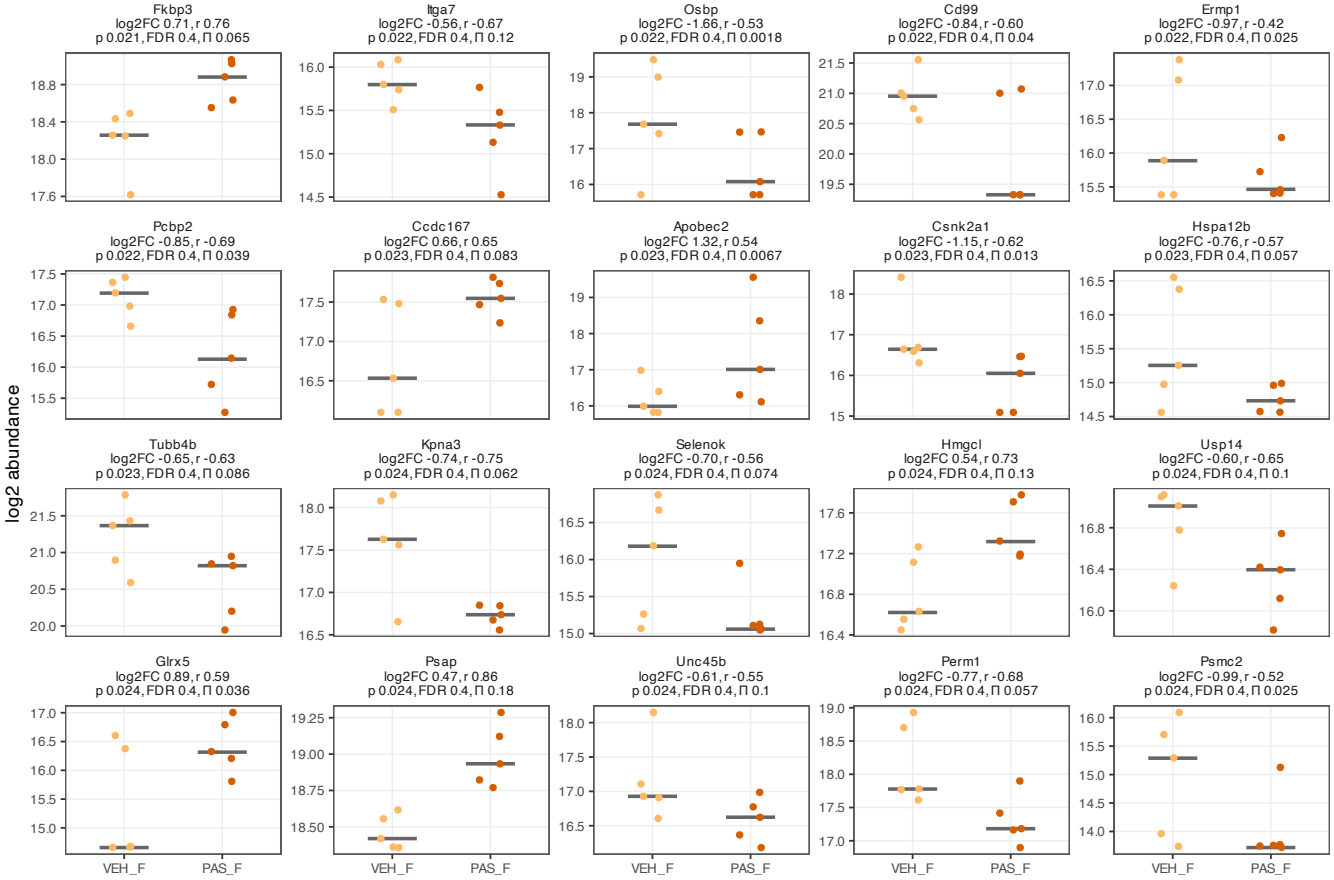

Female: every protein at p ≤ 0.05, in order of p

log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)

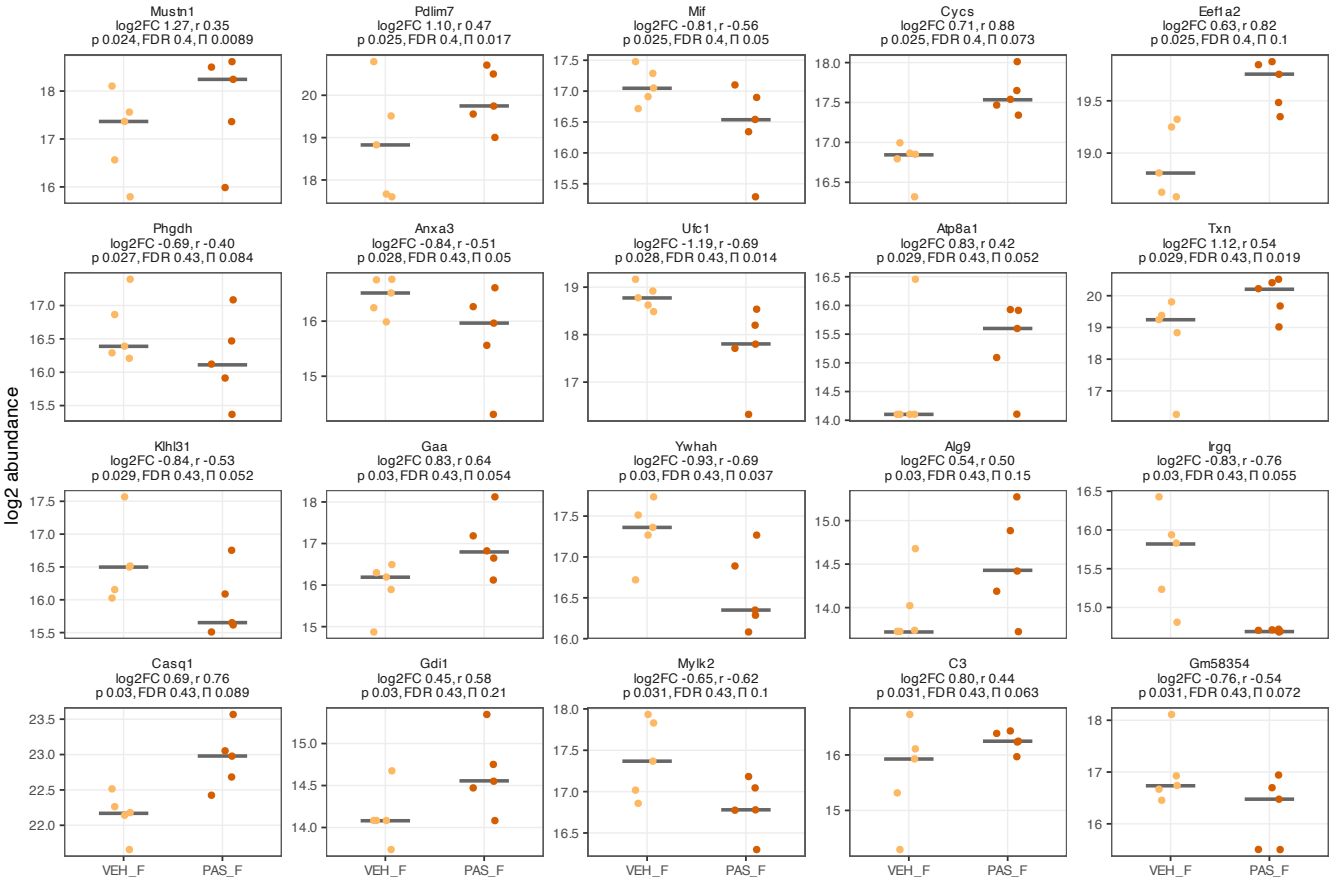

Female: every protein at p ≤ 0.05, in order of p

log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)

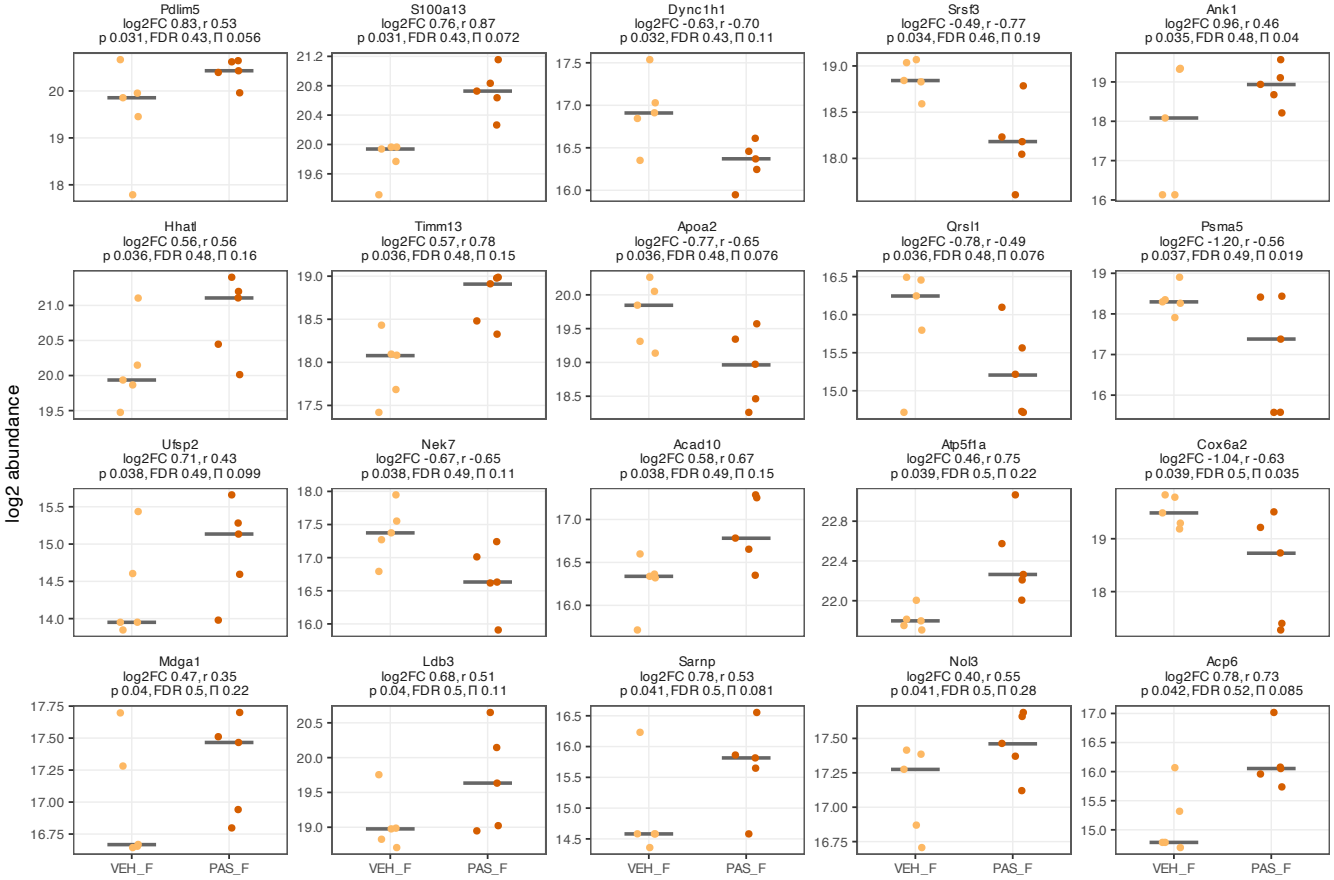

Female: every protein at p ≤ 0.05, in order of p

log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)

Female: every protein at p ≤ 0.05, in order of p

log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)

Female: every protein at p ≤ 0.05, in order of p

log2 abundance per mouse, bar at the group median; r: Pearson r with PAS (PAS = 1)
