

a

Proteome ordination

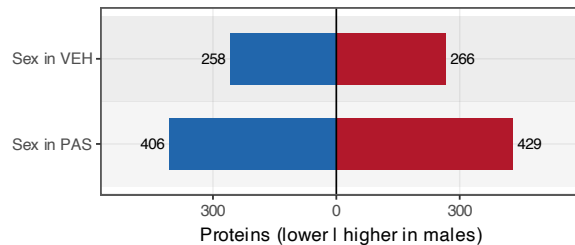

PERMANOVA: sex R^2 0.38, $p = 0.001$; treatment R^2 0.04, $p = 0.271$; interaction R^2 0.04, $p = 0.256$; MitoCarta share fitted with envfit

b

Baseline sex differences

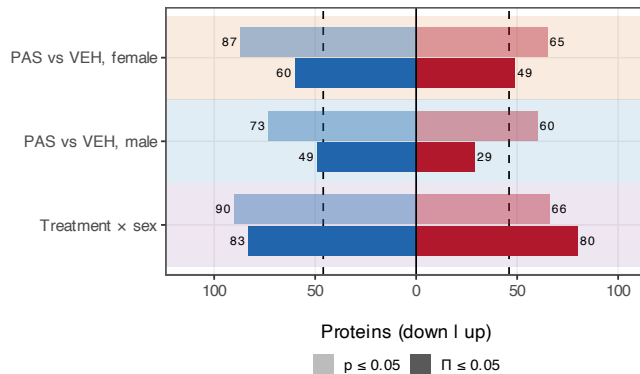

Male minus female, $FDR \leq 0.05$

c

Proteins PAS moves

$\Pi = p \wedge \log_2$ FCI ranks, it controls no error rate; dashed: 46 by chance; $FDR \leq 0.05$: 4 in female; none in males or for the interaction

d

Pathways per contrast

fgsea, every tested term; left bar up (reds), right bar down (blues), by database
