a Pathways in the full proteome
fgsea FDR ≤ 0.05 in any contrast; redundant sets removed
Female
Male
F – M
Muscle System Process
Myogenesis
Neuromuscular Process
Cell Cycle
Proteasome Mediated Ubiquitin Dependent Prote...
Small Molecule Catabolic Process
Supramolecular Fiber Organization
Cytoskeleton Organization
Regulation Of Actin Filament Organization
Cell Adhesion
EMT
Plasma Membrane Organization
ECM Receptor Interaction
Viral Myocarditis
Cardiac Muscle Contraction
Multicellular Organismal Level Homeostasis
Dilated Cardiomyopathy
Carbohydrate Derivative Biosynthetic Process
Striated Muscle Contraction
Actin Filament Based Process
Cellular Oxidant Detoxification
Nervous System Process
Extracellular Matrix Organization
Collagen Formation
Homeostatic Process
Striated Muscle Cell Differentiation
Circulatory System Development
Cellular Response To Chemical Stress
Heme Metabolism
