a Cellular compartments
GO Slim compartments, fgsea, full proteome
Endoplasmic Reticulum
Extracellular Region
Extracellular Matrix
External Encapsulating Structure
Vacuole
Peroxisome
Lipid Droplet
Organelle
Lysosome
Cytoskeleton
Golgi Apparatus
Nuclear Envelope
Mitochondrion
Nucleolus
Chromosome
Plasma Membrane
Cytoplasmic Vesicle
Cytosol
Nucleus
Ribosome
Cilium
Endosome
Microtubule Organizing Center
Nucleoplasm
Female
Male
Treatment × sex
b Literature-informed and ROS sets
Grouped by hypothesis; [expected direction]
Atrophy defence
Proteasome Mediated Ubiquitin Depen... [down]
Autophagy [down]
Energy status
OXPHOS [up]
Fatty Acid Oxidation [up]
TCA Cycle [up]
Oxidative fibre shift
Glycolysis [down]
Striated Muscle Contraction [up]
Pipecolate handling
Lysine Metabolism [unclear]
ROS (named in advance)
Cellular Response To Oxidative Stress [unclear]
Cellular Response To Reactive Oxyge... [unclear]
Reactive Oxygen Species Metabolic P... [unclear]
Response To Oxidative Stress [unclear]
ROS Pathway [unclear]
ROS And Glutathione Metabolism [unclear]
Detoxification Of Reactive Oxygen S... [unclear]
Translational capacity
Cytoplasmic Translation [up]
mTORC1 Signaling [up]
Mitochondrial Central Dogma [up]
Eukaryotic Translation Elongation [up]
