a Modules against contrasts and phenotypes

r-equivalent of each t, bold if absolute r ≥ 0.4; AUC cells show the AUC, filled by 2·AUC − 1; J: subsample stability

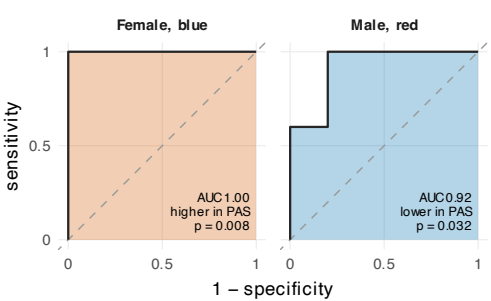
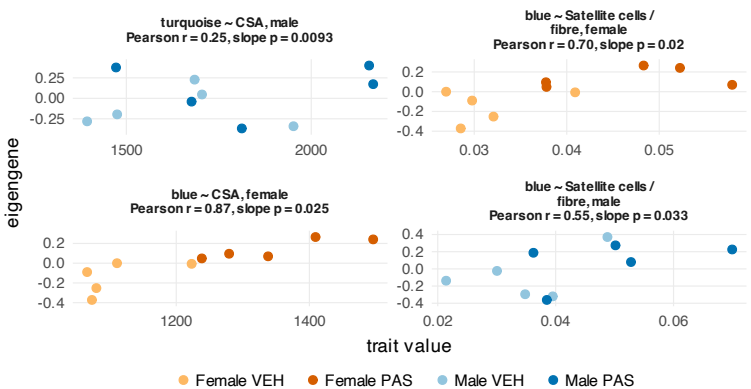
dashed box: p ≤ 0.05

r-equivalent or 2·AUC − 1: -1 0 1

b ROC of module eigengenes, PAS vs vehicle

Eigengene alone, within sex; Wilcoxon p ≤ 0.05



c Strongest module–trait pairs


One point per mouse; slope p adjusted for SV1
